

Science IDEAS “Story Scenarios”

A number of Science IDEAS teachers have told stories of how much their students have learned about science this year has surprised teachers or other adults. The purpose of this survey is to collect stories about one or more of your students that illustrate how much they have learned about science and how this learning impressed you or adults. Some examples this year include how impressed the Marlins visitors to Silver Ridge were about how much science students knew. Another was how much Discovery Key students showed a tour guide how much they knew about the everglades. Please think about possible stories involving your students and write them down in the following format:

Grade of Student(s): _____ **Teacher:** _____ **School:** _____

Note 1- if the story is about how a student or student(s) impressed you as a teacher, that is OK- just be specific about the setting, and specify yourself as the adult...

Note 2- If you have more than one story, please use separate sheets.

Setting (in school, out of school- please be specific):

Adult(s) in Setting who were impressed with student knowledge- please be specific but do not use names):

Kind of Science Knowledge Involved (please be specific):

Story- (please describe what happened and be as specific as possible in explaining how the science knowledge the student knew had an impact and what that impact was):
